

1 General

This manual defines operating and maintenance guidance for demonstration purposes. It is intentionally text-based so the service can extract headings without OCR.

1.1 Scope

The scope includes dispatch procedures, limitation references, and administrative responsibilities used in a typical technical document.

1.2 Definitions

Terms in this sample are simplified and do not represent official aviation documentation.

1.2.1 Minimum Equipment List

The MEL describes equipment conditions under which a flight may be dispatched.

2 Dispatch Procedures

Dispatch review should confirm open maintenance items, operational limitations, placarding requirements, and recurring inspection notes.

2.1 Normal Operation

Normal operation requires review of the aircraft logbook and confirmation that any active item is properly deferred.

2.1.1 Crew Notification

Crew notification must be clear, traceable, and available before release.

2.2 Abnormal Operation

Abnormal operation may require additional approval before dispatch.

3 Maintenance Control

Maintenance control coordinates repair planning, deferral tracking, and return-to-service documentation.

3.1 Responsibility

Assigned personnel should verify that required actions are recorded and closed at the correct interval.

Section A Records

Records should be preserved according to local regulatory and company policy.

MEL/CDL TABLES

This heading is uppercase to test non-numbered heading detection.

Appendix A Reference Material

Appendix material is included for testing keyword heading detection and bookmark creation.

Acronyms

MEL means Minimum Equipment List. CDL means Configuration Deviation List.

REVISION HISTORY

This final uppercase section helps verify style-based hierarchy inference.
